

Redefining How Healthcare Delivers Behavioral Health

evolvedMD partners with healthcare organizations of all sizes —from large health systems to community-based clinics—to integrate behavioral health seamlessly across care settings, improving outcomes, reducing costs, and empowering providers.

The Challenge: A Broken System Demanding Change

Across the United States, patients face unprecedented barriers to behavioral health access. Whether in primary care, specialty practices, or community health centers, providers are stretched thin. Nearly 60% of all behavioral health conditions are treated outside of behavioral health settings, placing the burden on clinicians who lack the time or resources to provide comprehensive support.¹

This strain fuels burnout, fragmented care, and higher costs, making integrated behavioral health an urgent priority across every corner of healthcare.

¹ American Medical Association, 2024.

The evolvedMD Solution: Integrated Behavioral Health That Scales

evolvedMD helps healthcare organizations embed licensed Behavioral Health Managers (BHM)s directly within existing care teams, wherever patients already receive care. By integrating behavioral health into primary care, specialty care, and community health settings, evolvedMD enables real-time collaboration between primary care providers (PCPs), specialists, psychiatrists, and BHM)s through the Collaborative Care Model (CoCM).

The result is a sustainable, human-centered approach that improves outcomes and strengthens clinical teams without adding administrative burden.

Our Integrated Approach Includes:

Onsite, In-person Behavioral Health Teams: BHM)s embedded across care settings for immediate collaboration and patient access.

Coordinated Team Care: PCPs, specialists, and psychiatrists working from a shared treatment plan.

Data-Driven Outcomes: Transparent tracking of PHQ-9 and GAD-7 improvement scores through integrated Electronic Health Records (EHRs).

The Impact: Measurable Outcomes, Human Results

evolvedMD's proven integration model delivers measurable improvements across partner organizations:

63%

of patients show clinically significant improvement in depression and anxiety scores (PHQ-9 and GAD-7).

15%

15% reduction in total cost of care.

25%

increase in provider satisfaction and retention.

“We partner with evolvedMD because their team makes behavioral health work in the real world—simple, collaborative, and effective.”

— Health System Executive Partner

Why evolvedMD: Partnership in Practice

evolvedMD is not a vendor. It is a partner invested in helping healthcare organizations deliver sustainable, whole-person health. The model meets organizations where they are, aligning with their goals, infrastructure, and patient populations to make integrated behavioral health achievable, not aspirational.

Our Difference:

- Cross-Setting Flexibility: Works across primary care, specialty clinics, and community health.
- Efficient Implementation: Seamlessly integrates into existing workflows.
- Human Connection: Care teams built on trust, communication, and shared accountability.
- Proven ROI: Real-world outcomes that demonstrate both clinical and financial value.

Together, We're Closing the Behavioral Health Gap

Integrated behavioral health is transforming care delivery across the nation. evolvedMD is leading this change by helping health systems, community organizations, and clinical practices close the behavioral health gap for good.
